

EX NO: 4

CREATE USER STORIES

Aim:

To create User Stories

THEORY

A user story is an informal, general explanation of a software feature written from the perspective of the end user. Its purpose is to articulate how a software feature will provide value to the customer.

User story template

"As a [role], I [want to], [so that]."

Procedure:

1. Open your web browser and go to the Azure website: <https://azure.microsoft.com/en-in> Sign in using your Microsoft account credentials. If you don't have an account, you'll need to create one.
2. If you don't have a Microsoft account, you can sign up for <https://signup.live.com/?lic=1>

3. Azure home page

4. Open DevOps environment in the Azure platform by typing Azure DevOps Organizations in the search bar.

5. Click on the My Azure DevOps Organization link and create an organization and you should be taken to the Azure DevOps Organization Home page.

6. Create the First Project in Your Organization

After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.

- i. On the organization's **Home page**, click on the **New Project** button.
- ii. Enter the project name, description, and visibility options:
 - o **Name:** Choose a name for the project (e.g., **LMS**).
 - o **Description:** Optionally, add a description to provide more context about the project.
 - o **Visibility:** Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
- iii. Once you've filled out the details, click **Create** to set up your first project.

7. Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner (next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

8. Project dashboard

9. To manage user stories

- From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.
- On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a **+** button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

10. Fill in User Story Details

Details

Description As a registered user, I want to log into my account so that I can access my personal dashboard and features. Acceptance Criteria 1. The user should be able to access the login page from the homepage or a direct URL. 2. The login form must have fields for email/username and password. 3. If the user submits an empty field, they should see a validation error. 4. If the email format is invalid, an error message should be displayed. 5. If valid credentials are provided, the user should be redirected to their dashboard. 6. If incorrect credentials are entered, an appropriate error message should be displayed. 7. If the user enters incorrect credentials more than 5 times, their account should be temporarily locked for 10 minutes. 8. The password input field should be masked by default but allow users to toggle visibility. 9. Users should have an option to reset their password via a "Forgot Password?" link.	Planning Story Points: 3 Priority: 2 Risk: 2 - Medium Classification Value area: Business	Deployment To track releases associated with this work item, go to Releases and turn on deployment status reporting for Boards in your pipeline's Options menu. Learn more about deployment status reporting Development Add link Link an Azure Repos commit, pull request or branch to see the status of your development. You can also create a branch to get started. Related Work
